

Soils Site 1

Soils Site 2

- * This is a Preliminary Soils Investigation for potential septic use. Sites 1 and 2 have favorable soils for at least a 3-4 Bedroom house... likely more. There is likely additional favorable soils on each tract. Further more detailed soils investigation is required to acquire septic approval from Williamson Co Sewage Disposal office (WCSO)... clearing (mulching) of sites may be necessary.
- * The third tract north of I-65 has had soils disturbance. A site that appeared to be undisturbed was identified but needs clearing (mulching) before it can be further investigated.
- * Any cutting or filling of natural soils will void those soils for septic use. Heavy traffic over soils sites may compact the soils and make it unfavorable. Clear/mulch soils areas only when dry!
